

Digital Marketing Strategy

DreamLearn E-Learning Platform

Unified Mentor Capstone — E-Learning Website Audit & Digital Marketing Implementation

Website: <https://dreamlearn.umacreates.com>

Prepared by: S. Umayal

Program: Digital Marketing | Organization: Unified Mentor

September 2026

1. Overview

This document sets out DreamLearn's digital marketing strategy across four channels: search engine optimization, content marketing, paid advertising, and social media promotion. It builds directly on the findings of the Website Redesign Proposal, translating audit insights into a forward-looking growth plan for the platform's five course-related pages: Home, About, Courses, Blog, and Contact.

DreamLearn currently has strong technical foundations (fast load times, clean indexing) but minimal search visibility and no established content or promotional presence. The strategy below is built around that reality: it prioritizes visibility and credibility-building activities suited to an early-stage e-learning site in the digital design education space (graphic design, web design, UI/UX, and VFX).

2. SEO Strategy

2.1 Current State

- All 5 primary pages (Home, About, Courses, Blog, Contact) are indexed on Google.
- Search performance is at an early stage: 15 impressions, 0 clicks, 0% CTR, average position 7.3 over the recorded period.
- The only recorded query driving impressions to date is the brand term “dreamlearn” — there is no non-branded keyword visibility yet.
- On-page SEO quality is already strong (8–9/10 across pages); the main SEO gaps are structural (unlinked Courses/Blog content) and off-page (no backlinks or external authority).

2.2 Target Keyword Strategy

Because DreamLearn has no non-branded search visibility yet, the priority is to target keywords with realistic ranking potential for a new site: long-tail, intent-specific phrases rather than broad, highly competitive terms (e.g. “graphic design”).

Page	Target Keyword Focus	Intent
Home	“DreamLearn online design courses”, “learn graphic design and web design online”	Branded + navigational
Courses	“online UI/UX design course for beginners”, “learn VFX online”, “graphic design course with certificate”	Commercial / high intent
Blog	“graphic design tips for beginners”, “UI vs UX design difference”, “how to start a career in VFX”	Informational (top-of-funnel)
About	“DreamLearn design academy”, “online design learning	Branded / trust-building

Page	Target Keyword Focus	Intent
	platform”	

2.3 On-Page & Technical SEO Roadmap

- Link Courses “Learn More” buttons to dedicated course pages, each targeting one course-specific keyword (directly supports both SEO and conversion).
- Publish real blog articles behind the existing Blog page cards, each optimized for one informational keyword from the table above.
- Add outbound links to credible external sources (design tools, industry publications) from Blog and Courses content — currently absent sitewide.
- Fix the Home page 403 resource error and the recurring accessibility issues (color contrast, heading order, missing landmark) identified in the audit, since technical health supports crawlability and rankings.
- Add descriptive alt text and keyword-relevant file names to course and blog images as content is built out.

2.4 Off-Page SEO Roadmap

- List DreamLearn on relevant online-course directories and education aggregators to begin building referring domains.
- Create and link active social media profiles (currently none), which support both off-page signals and direct traffic.
- Pursue 2–3 guest-post or collaboration opportunities with design blogs or communities once Blog content is live, to earn early backlinks.

2.5 KPIs & Monitoring

- Track impressions, clicks, CTR, and average position monthly via Google Search Console, using the current baseline (15 impressions, 0 clicks, position 7.3) as the starting point.
- Monitor non-branded query growth specifically, since brand-term “dreamlearn” searches do not indicate organic keyword visibility.
- Re-run Lighthouse checks after implementing accessibility and technical fixes to confirm score improvements.

3. Content Marketing Plan

3.1 Objectives

- Turn the Blog page from placeholder cards into a real content engine that supports SEO keyword targets.
- Build topical credibility in DreamLearn's four course areas: graphic design, web design, UI/UX, and VFX.
- Create content that can be repurposed across the blog, social media, and (later) paid campaigns.

3.2 Content Pillars

Pillar	Example Topics	Supports
Graphic Design	Beginner design principles, tool comparisons (Canva vs. Photoshop), portfolio tips	Graphic design course
Web Design	Design trends, responsive design basics, before/after redesign breakdowns	Web design course
UI/UX	UI vs UX explained, case studies, common beginner mistakes	UI/UX course
VFX	Career-path guides, software overviews, showreel tips	VFX course

3.3 Content Calendar (First 8 Weeks)

Week	Content Piece	Pillar
1-2	"Graphic Design for Beginners: 7 Principles to Know" (first real Blog post, replacing a placeholder card)	Graphic Design
3-4	"UI vs UX: What's the Difference and Why It Matters"	UI/UX
5-6	"5 Web Design Trends to Watch This Year"	Web Design
7-8	"How to Start a Career in VFX: A Beginner's Roadmap"	VFX

Each post is scoped to replace one existing Blog page card, directly resolving the audit finding that article cards are not yet linked to real content.

3.4 Distribution & Internal Linking

- Cross-link each blog post to its related Courses page, turning informational content into a conversion path.
- Share each new post across DreamLearn's social channels (see Section 5) at launch.
- Add at least one relevant outbound link per post to a credible external resource, addressing the sitewide lack of outbound links.

4. Paid Advertising Plan

4.1 Objectives

- Generate immediate, measurable traffic and enrollment interest while organic SEO and content efforts build up over time.
- Test which course (graphic design, web design, UI/UX, or VFX) generates the strongest response before committing a larger budget to any one area.

4.2 Recommended Channels

- Google Search Ads: target the same commercial, high-intent keywords identified in Section 2.2 (e.g. “online UI/UX design course for beginners”) to capture people already looking for a course.
- Facebook/Instagram Ads: awareness-stage campaign targeting interests such as graphic design, digital art, web design, and career-change audiences — mirroring the interest-based targeting approach used successfully in DreamLearn's prior Facebook Ads practice campaign.

4.3 Campaign Concept

Element	Recommendation
Objective	Google: Conversions/Leads (course inquiries). Facebook/Instagram: Awareness or Traffic, to build initial visibility.
Audience	Google: search-based, matched to the keyword table in Section 2.2. Facebook/Instagram: interests in graphic design, UI/UX, web design, VFX, and career development.
Suggested Daily Budget	₹300–₹500/day per platform for an initial 2–4 week test window, scaled based on which course/channel performs best.
Ad Creative Direction	Highlight one course at a time with a clear outcome (e.g. “Build a UI/UX portfolio in 8 weeks”) rather than promoting all four courses in one ad.
Landing Destination	Link ads directly to the relevant Courses page — contingent on the Section 2.3 fix linking “Learn More” buttons to real course pages.

This plan intentionally mirrors the structure used in DreamLearn's Facebook Ads practice campaign (Bean & Bloom-style draft setup), adapted here to real course targeting rather than a fictional business.

4.4 Measurement

- Track cost-per-click, click-through rate, and cost-per-lead/inquiry for each campaign.
- Compare performance across the four course areas to decide where to concentrate future budget.

5. Social Media Promotion Plan

5.1 Objectives

- Establish DreamLearn's first active social presence — none currently exists, which also limits off-page SEO signals (Section 2.4).
- Use social channels to distribute Blog content and build early audience trust ahead of any paid spend.

5.2 Recommended Platforms

- Instagram: visual showcases of student/course work, design tips carousels, and short behind-the-scenes content — a natural fit for a visual-design-focused course platform.
- LinkedIn: positions DreamLearn toward career-changers and professionals, aligning with the “career path” content pillar (e.g. the VFX career-roadmap blog post).
- Pinterest (optional, low-effort): well suited to graphic/web design visual content and can drive long-tail referral traffic over time.

5.3 Content-to-Social Mapping

Blog Content	Social Adaptation
“Graphic Design for Beginners: 7 Principles to Know”	Instagram carousel of the 7 principles, one per slide
“UI vs UX: What's the Difference”	LinkedIn post framed around career clarity for job-seekers
“5 Web Design Trends to Watch”	Instagram/Pinterest visual examples of each trend
“How to Start a Career in VFX”	LinkedIn career-roadmap post + Instagram Reel teaser

5.4 Posting Cadence

- 2–3 posts per week per platform to start — sustainable given current time constraints, prioritizing consistency over volume.
- Align each post with a blog publish date (Section 3.3) so content is repurposed rather than created from scratch twice.

6. Conclusion

DreamLearn's digital marketing strategy is deliberately sequenced: SEO and content work address the site's current lack of organic visibility, paid advertising provides faster, measurable validation of course demand, and social media builds the audience and authority signals the site currently lacks entirely. Each channel is scoped realistically for an early-stage platform, and each connects back to the fixes identified in the Website Redesign Proposal — particularly the Courses and Blog linking issues, which directly gate the success of both the content and paid advertising plans above.
