

Website Redesign Proposal

DreamLearn E-Learning Platform

Unified Mentor Capstone — E-Learning Website Audit & Digital Marketing Implementation

Website: <https://dreamlearn.umacreates.com>

Prepared by: S. Umayal

Program: Digital Marketing | Organization: Unified Mentor

September 2026

1. Project Overview

This report presents a comprehensive audit of the DreamLearn e-learning website and a set of prioritized redesign recommendations. The audit covers on-page content and SEO quality, technical performance, off-page authority, and search visibility, and translates the findings into concrete, prioritized redesign actions.

DreamLearn is a WordPress-based e-learning site offering courses in digital design disciplines (graphic design, web design, UI/UX, and VFX) across five primary pages: Home, About, Courses, Blog, and Contact.

2. Objectives

- Assess on-page content/SEO quality, technical performance, and search visibility as a single, consolidated audit view.
- Identify concrete UX, content, technical, and accessibility issues limiting DreamLearn's effectiveness.
- Propose a prioritized, actionable redesign plan addressing navigation, conversion, content, and technical health.
- Provide a foundation for the accompanying Digital Marketing Strategy document.

3. Consolidated Audit Summary

Four audit dimensions were assessed: content/on-page SEO, technical performance (tested via Google Lighthouse/PageSpeed Insights), off-page authority, and search visibility (via Google Search Console).

Audit Area	Verdict	Key Evidence
Content / On-Page SEO	Strong (8–9/10)	Home 8/10, About 9/10, Courses 9/10, Blog 8/10. Gaps: no outbound/external links sitewide; Courses “Learn More” buttons and Blog article cards not linked to real destination pages.
Technical / Performance	Excellent, with fixable bugs	Lighthouse scores 96–100 across Performance, Best Practices, and SEO on Home, Courses, and Blog. Core Web Vitals strong sitewide (sub-1s load times). A 403 network error occurs on Home page load. Recurring accessibility issues (color contrast, malformed accessibility tree) on all three pages tested.
Off-Page / Authority	Minimal / not yet established	No meaningful backlink profile or domain authority, consistent

Audit Area	Verdict	Key Evidence
		with a practice site with no promotion to date. This is an expected starting point rather than a defect, and is addressed as a forward-looking recommendation.
Search Visibility (GSC)	Early stage	All 5 primary pages confirmed indexed after indexing requests were submitted. Search performance remains minimal: 15 impressions, 0 clicks, 0% CTR, average position 7.3. HTTPS, crawl stats, and robots.txt all healthy.

4. Page-by-Page Findings

4.1 Home Page

- On-page SEO score: 8/10. Highest search visibility of any page (8 impressions in GSC monitoring).
- Lighthouse (desktop): Performance 97, Accessibility 85, Best Practices 96, SEO 100.
- Technical bug: a resource fails to load with a 403 status error on page load — unique to this page among those tested.
- No outbound/external links present.

4.2 About Page

- On-page SEO score: 9/10 — the highest-scoring page.
- Confirmed indexed; received 1 impression in the latest search performance monitoring snapshot.
- Not separately Lighthouse-tested this cycle; expected to mirror the strong scores seen on Home/Courses/Blog given the shared theme.

4.3 Courses Page

- On-page SEO score: 9/10.
- Lighthouse (desktop): Performance 97, Accessibility 89, Best Practices 100, SEO 100.
- Conversion issue: “Learn More” buttons do not link to dedicated individual course pages — a direct barrier to enrollment.
- High-priority page: confirmed indexed, but not yet appearing with impressions in the Performance report — needs content and internal-linking work to build visibility.

4.4 Blog Page

- On-page SEO score: 8/10.

- Lighthouse (desktop): Performance 98, Accessibility 89, Best Practices 100, SEO 100.
- Structural gap: article cards on the Blog page are not linked to individual WordPress posts — the content exists as cards only, with no real underlying articles.
- Confirmed indexed, but (like Courses) not yet generating impressions — expected, since there is no real content behind the cards yet.

4.5 Contact Page

- Confirmed indexed; received 5 impressions in the latest GSC monitoring snapshot — the second-most visible page.
- Contact form confirmed functional during audit testing.

5. Redesign Recommendations

Recommendations are grouped by theme and prioritized by impact versus effort, reflecting the project's compressed timeline.

5.1 High Priority (fix first)

- Link the Courses page “Learn More” buttons to dedicated individual course pages, so visitors can move from interest to enrollment.
- Create and link at least a small set of real Blog posts to the existing article cards, turning placeholder content into indexed, crawlable pages.
- Investigate and resolve the 403 resource error on the Home page — likely a missing asset or misconfigured plugin request.
- Fix insufficient color-contrast instances flagged sitewide, to meet basic accessibility standards.

5.2 Medium Priority

- Add outbound/external links where relevant (e.g. citing tools, design resources, or industry sources) — currently absent sitewide, which weakens content credibility and topical signals.
- Correct heading order and add a semantic <main> landmark element to improve screen-reader navigation and accessibility scoring.
- Add trust-building elements to Courses and Home — student testimonials, instructor credentials, or sample outcomes — to support conversion once traffic grows.

5.3 Lower Priority / Ongoing

- Trim unused CSS/JavaScript and address render-blocking requests — minor given already-strong performance scores (96–100).
- Continue monitoring Core Web Vitals and Mobile Usability in Search Console as real user traffic accumulates.
- Build off-page authority over time via course directories, guest content, and social profile links, since none currently exist.

6. Action Priority Matrix

Issue	Impact	Effort	Priority
Courses “Learn More” buttons not linked	High	Low	High
Blog article cards not linked to real posts	High	Medium	High
403 error on Home page load	Medium	Low	High
Color contrast / accessibility tree issues	Medium	Low	High
No outbound links sitewide	Medium	Low	Medium
Heading order / missing <main> landmark	Low-Medium	Low	Medium
No trust signals (testimonials, credentials)	Medium	Medium	Medium
Unused CSS/JS, render-blocking requests	Low	Medium	Low
No off-page authority / backlinks	High (long-term)	High	Ongoing

7. Conclusion

DreamLearn is technically well-built — fast, clean, and already indexed — but is held back by a small number of concrete, fixable issues: broken internal links on its two most important conversion pages (Courses and Blog), a page-load error on the homepage, and minor accessibility gaps. None of these require a rebuild; they require targeted fixes.

Addressing the high-priority items above would remove the main barriers between DreamLearn's existing indexed pages and real user engagement, and would set a stronger foundation for the digital marketing activities proposed in the accompanying Digital Marketing Strategy document.
